AB Metal complexes of new ligands (I) are useful as agents for medical imaging, particularly MRI, for in vitro or in vivo diagnostic or as radiopharmaceuticals. In these compds., X--R1--Y is a coordinating group able to form a highly stable complex with metal ions. Suitable units are, for example, derivs. of ortho-phenanthroline or of an hydroxamic acid. R2 and R3 are reactive functions such as amines or carboxylic groups. R4 and R5 are ligands, for instance diethylenetriaminepentaacetic acid, 1,4,7,10-tetraacetic acid (DTPA), 1,4,7,10-tetraazacyclododecane-1,4,7,10-tetraacetic acid (DOTA) or 1,4,8,11-tetraazacyclotetradecane-N,N',N''-tetraacetic acid (TETA), of a different type than the X--R1--Y units and able to strongly encapsulate metal ions with which the X--R1--Y moieties form less stable chelates. Stable high mol. weight multimetallic entities are spontaneously formed by these ligands that spontaneously associate around metal ions through the X--R1--Y units. Higher relaxivities thus are

AB Metal complexes with  $\geq 10\%$  (preferably  $\geq 80\%$ ) plasma protein binding are useful as diagnostic imaging agents for locating an infarct or necrosis by formation of a persistent pos. (bright) image. The complexes have mol. weight  $> 350$  Da, relaxivity  $> 2.0$  s $^{-1}$  mM $^{-1}$  at 20 MHz and 37° in plasma, good water solubility, and may contain a paramagnetic metal for NMR diagnosis or a radioactive metal for radiog. diagnosis. They show good stability in vitro and in vivo, and do not release significant amts. of toxic metal ions in vivo prior to excretion. The complexing agent is e.g. a polyaminopolycarboxylic acid, polyaminopolyposphonic acid, porphyrin, texaphyrin, sapphyrin, or peptide. Thus, in rats with kidney infarcts induced by left renal artery occlusion, the infarcts were visualized by i.v. injection of the Gd complex, Eovist, and MRI tomog. 24 h later. The observed size of the necrotic region correlated well with that seen by histol. vital staining.

 fully or partially satd. nonarom. cyclohexyl (un)substituted ring, etc.;  
 R5 = H, alkyl, aryl, aralkyl, alkoxy, etc.; R6 = H; alkyl; n = 0,1] and  
 metal chelates thereof are useful particularly for MRI of the  
 hepatobiliary system. Prepn. of selected I (e.g. 2,5,8,11-  
 Tetraacetic acid-2,5,8,11-tetraazabicyclo[10,4,0]hexadecane) is  
 described, as is prepn. of gadolinium complexes.
